2014 Consumer Confidence Report

Water System Name:	Lassen View School	Report Date: March 13, 2015
We test the drinking w	ater quality for many constituents as r ne results of our monitoring for the per	equired by state and federal regulations. This report shows riod of January 1 - December 31, 2014.
Este informe contiene	e información muy importante sobre entiend	e su agua potable. Tradúzcalo ó hable con alguien que lo a bien.
Type of water source(s)) in use: Groundwater Well	
Name & location of sou	urce(s): Lassen View School	
10818 Highway 99E Lo	os Molinos, Ca 96055	
Drinking Water Source	Assessment information: Inspectio	n report dated October 25, 2011 available at the
	onmental Health office (633 Washingto	
Time and place of regu PM at Lassen View Ele	=	blic participation: Third Monday of every month at 7:00
For more information.	contact: Don Jasielum	Phone: (530) 527-5162

TERMS USED IN THIS REPORT:

Maximum Contaminant Level (MCL): The highest level of a contaminant that is allowed in drinking water. Primary MCLs are set as close to the PHGs (or MCLGs) as is economically and technologically feasible. Secondary MCLs are set to protect the odor, taste, and appearance of drinking water.

Maximum Contaminant Level Goal (MCLG): The level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs are set by the U.S. Environmental Protection Agency (USEPA).

Public Health Goal (PHG): The level of a contaminant in drinking water below which there is no known or expected risk to health. PHGs are set by the California Environmental Protection Agency.

Maximum Residual Disinfectant Level (MRDL): The level of a disinfectant added for water treatment that may not be exceeded at the consumer's tap.

Maximum Residual Disinfectant Level Goal (MRDLG): The level of a disinfectant added for water treatment below which there is no known or expected risk to health. MRDLGs are set by the U.S. Environmental Protection Agency.

Primary Drinking Water Standards (PDWS): MCLs and MRDLs for contaminants that affect health along with their monitoring and reporting requirements, and water treatment requirements.

Secondary Drinking Water Standards (SDWS): MCLs for contaminants that affect taste, odor, or appearance of the drinking water. Contaminants with SDWSs do not affect the health at the MCL levels.

Treatment Technique (TT): A required process intended to reduce the level of a contaminant in drinking water.

Regulatory Action Level (AL): The concentration of a contaminant which, if exceeded, triggers treatment or other requirements that a water system must follow.

Variances and Exemptions: Department permission to exceed an MCL or not comply with a treatment technique under certain conditions.

ND: not detectable at testing limit

ppm: parts per million or milligrams per liter (mg/L)

ppb: parts per billion or micrograms per liter (ug/L)

ppt: parts per trillion or nanograms per liter (ng/L)

pCi/L: picocuries per liter (a measure of radiation)

The sources of drinking water (both tap water and bottled water) include rivers, lakes, streams, ponds, reservoirs, springs, and wells. As water travels over the surface of the land or through the ground, it dissolves naturally-occurring minerals and, in some cases, radioactive material, and can pick up substances resulting from the presence of animals or from human activity.

Contaminants that may be present in source water include:

- *Microbial contaminants*, such as viruses and bacteria, that may come from sewage treatment plants, septic systems, agricultural livestock operations, and wildlife.
- *Inorganic contaminants*, such as salts and metals, that can be naturally-occurring or result from urban stormwater runoff, industrial or domestic wastewater discharges, oil and gas production, mining, or farming.
- Pesticides and herbicides, that may come from a variety of sources such as agriculture, urban stormwater runoff, and residential uses.
- Organic chemical contaminants, including synthetic and volatile organic chemicals, that are byproducts of industrial
 processes and petroleum production, and can also come from gas stations, urban stormwater runoff, agricultural
 application, and septic systems.
- Radioactive contaminants, that can be naturally-occurring or be the result of oil and gas production and mining activities.

In order to ensure that tap water is safe to drink, the USEPA and the state Department of Public Health (Department) prescribe regulations that limit the amount of certain contaminants in water provided by public water systems. Department regulations also establish limits for contaminants in bottled water that provide the same protection for public health.

Tables 1, 2, 3, 4, and 5 list all of the drinking water contaminants that were detected during the most recent sampling for the constituent. The presence of these contaminants in the water does not necessarily indicate that the water poses a health risk. The Department allows us to monitor for certain contaminants less than once per year because the concentrations of these contaminants do not change frequently. Some of the data, though representative of the water quality, are more than one year old.

TABLE 1 - 3	SAMPLING	RESULTS	SHOWING T	HE DETECT	YON OF C	COLIFORM BACTERIA
Microbiological Contaminants (to be completed only if there was a detection of bacteria)	Highest No. of detections	No. of months in violation	MCL		MCLG	Typical Source of Bacteria
Total Coliform Bacteria	(In a mo.)	0	More than 1 sample in a month with a detection		0	Naturally present in the environment
Fecal Coliform or E. coli	(In the year)	0	A routine sample sample detect to and either sampl fecal coliform or	tal coliform e also detects	0	Human and animal fecal waste
TABLE 2	- SAMPLIN	G RESUL	TS SHOWING	THE DETEC	CTION OF	LEAD AND COPPER
Lead and Copper (to be completed only if there was a detection of lead or copper in the last sample set)	No. of samples collected	90 th percentile level detected	No. sites exceeding AL	AL	PHG	Typical Source of Contaminant
Lead 8-6-2010	5	.00001 mgL	0	15	2	Internal corrosion of household water plumbing systems; discharges from industrial manufacturers; erosion of natura deposits
Copper 8-6-2010	5	.00041 mgL	0	1.3	0.17	Internal corrosion of household plumbing systems; crosion of natural deposits; leaching from wood preservatives
	TABLE 3	- SAMPLI	NG RESULTS	FOR SODIU	M AND H	ARDNESS
Chemical or Constituent (and reporting units)	Sample Date	Level Detected	Range of Detections	MCL	PHG (MCLG)	Typical Source of Contaminant
Sodium (ppm)	3-16-2009	15mgL	0	none	none	Generally found in ground & surface water
Hardness (ppm)	3-16-2009	276mgL	0	none	none	Generally found in ground & surface wate

^{*}Any violation of an MCL or AL is marked with an asterisk. Additional information regarding the violation is provided later in this report.

Chemical or Constituent (and reporting units)	Sample Date	Level Detecte d	Range of Detections	MCL [MRDL]	PHG (MCLG) [MRDLG]	Typical Source of Contaminant
Nitrate	03-05-2015	19.2mg /L	19-20	45mg/L	45	Runoff and leaching from fertilizer use; leaching from septic tanks; sewage, erosion of natural deposits.
Barium	4-9-2009	40.2ug L	40-41	1000ug/L	2	Discharge of oil drilling wastes and from metal refineries; erosion of natural deposits
Chromium	4-9-2009	3ugL	2-4	50ugL	50	Discharge from steel and pulp mills and chrome plating; erosion of natural deposits
Gross Alpha	3-16-2009	1.70pCi L	1-2	3	0	Erosion of natural deposits
TARLE 5 - DETE	CTION OF CO	NTAMIN	ANTS WITH	A SECON	DARY DRIN	KING WATER STANDARD
Chemical or Constituent (and reporting units)	Sample Date	Level Detecte d	Range of Detections	MCL	PHG (MCLG)	Typical Source of Contaminant
Sulfate	03-28-2012	47mgL	47	500		Runoff/leaching from natural deposits; seawater influence
Chloride	03-28-2012	31mgL	31	500	Polymer and the control of the contr	Runoff/leaching from natural deposits; industrial wastes
Aluminum	4-9-2009	70ugL	69-71	1000	,6ррт	Erosion of natural deposits; residue from some surface water treatment processes
	TABLE 6 - D	1) CONTAMI	
Chemical or Constituent (and reporting units)	Sample Date	Leve Detect		Notification Level		Health Effects Language
Vanadium	4-9-2009	20ugL		,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,	The babies of some pregnant women who drink water containing vanadium in exces the notification level may have an increas risk of developmental effects, based on st	

^{*}Any violation of an MCL, MRDL, or TT is asterisked. Additional information regarding the violation is provided later in this report.

Additional General Information on Drinking Water

in laboratory animals.

Drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that the water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the USEPA's Safe Drinking Water Hotline (1-800-426-4791).

Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ

transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at from infections. These people should seek advice about drinking water from their health care providers. USEPA/Cer for Disease Control (CDC) guidelines on appropriate means to lessen the risk of infection by <i>Cryptosporidium</i> and of the control (CDC) guidelines on appropriate means to lessen the risk of infection by <i>Cryptosporidium</i> and of the control (CDC) guidelines on appropriate means to lessen the risk of infection by <i>Cryptosporidium</i> and of the control (CDC) guidelines on appropriate means to lessen the risk of infection by <i>Cryptosporidium</i> and of the control (CDC) guidelines on appropriate means to lessen the risk of infection by <i>Cryptosporidium</i> and of the control (CDC) guidelines on appropriate means to lessen the risk of infection by <i>Cryptosporidium</i> and of the control (CDC) guidelines on appropriate means to lessen the risk of infection by <i>Cryptosporidium</i> and of the control (CDC) guidelines on appropriate means to lessen the risk of infection by <i>Cryptosporidium</i> and of the control (CDC) guidelines on appropriate means to lessen the risk of infection by <i>Cryptosporidium</i> and of the control (CDC) guidelines on appropriate means to lessen the risk of infection by <i>Cryptosporidium</i> and of the control (CDC) guidelines on appropriate means to lessen the risk of infection by <i>Cryptosporidium</i> and the control (CDC) guidelines on appropriate means to lessen the risk of the control (CDC) guidelines on appropriate means to lessen the risk of the control (CDC) guidelines on appropriate means to lessen the control (CDC) guidelines on appropriate means to less the control (CDC) guidelines on appropriate means to less the control (CDC) guidelines on appropriate means to less the control (CDC) guidelines on appropriate means to less the control (CDC) guidelines on appropriate means to less the control (CDC) guidelines on appropriate means to less the control (CDC) guidelines on appropriate mean	nters
microbial contaminants are available from the Safe Drinking Water Hotline (1-800-426-4791).	
Summary Information for Contaminants Exceeding an MCL, MRDL, or AL, or a Violation Any Treatment Technique or Monitoring and Reporting Requirement	of

For Water Systems Providing Ground Water as a Source of Drinking Water

TABLE 7 – SAMPLING RESULTS SHOWING FECAL INDICATOR-POSITIVE GROUND WATER SOURCE SAMPLES						
Microbiological Contaminants (complete if feeal-indicator detected)	Total No. of Detections	Sample Dates	MCL [MRDL]	PHG (MCLG) [MRDLG]	Typical Source of Contaminant	
E. coli	(In the year)		0	(0)	Human and animal fecal waste	
Enterococci	(In the year)		TT	n/a	Human and animal fecal waste	
Coliphage	(In the year) 0		TT	n/a	Human and animal fecal waste
